

CASTLE GATE OPENING SHOT

////

This style block gets copied word-for-word into the seven prompts that follow.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of classic Castlevania games. A lone vampire hunter in a tattered dark-blue coat, holding a long whip coiled at his belt, stands before towering wrought-iron gothic castle gates atop a cliff. A full blood-red moon glows behind jagged castle towers; bats circle overhead; thin fog rolls across cracked stone stairs leading up to the gate.

Style: classic 16-bit Castlevania pixel art, chunky readable pixels, moody gothic game-dev aesthetic, dithered shading, no anti-aliasing blur.

Lighting: cold blue moonlight contrasted with warm torchlight flanking the gate, deep purple-black night sky, dramatic rim light on the hunter's silhouette.

Composition: wide banner, hunter lower-left, castle gate dominating the right and center, strong vertical gothic architecture, cinematic RPG intro framing.

Constraints: no readable text anywhere, no logos, no watermark, no UI labels.

KEY MOVE

One banned word — “**no anti-aliasing blur**” — is what keeps this pixel art instead of a smooth digital painting.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

One hero, one prop, one coat colour. **Whip + tattered dark-blue coat** reads as “vampire hunter” with zero labels.

04 LIGHTING

A cold/warm pair invents depth for free and drops the focal point on the gate — no extra framing needed.

02 SETTING

Cliff, iron gate, blood moon, bats, fog — **five cheap nouns** that do all of the world-building.

05 COMPOSITION

Hero off-centre, gate dominant: **cinematic**, not a passport photo. Wide banner is stated up front.

03 STYLE

Names the exact era (16-bit) **and forbids the model's default habit**. The ban matters more than the label.

06 CONSTRAINTS

Text and UI banned explicitly — the asset has to survive being reused in a deck, a banner, a thumbnail.

RESULT

16-BIT

BLOOD MOON

COLD VS WARM

NO TEXT

GPT-IMAGE · 1536×1024

RELIC SHRINE FOUR PILLARS

////

How to render a list without drawing one: four ideas become four numbered objects.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of classic Castlevania games. A stone candle-lit shrine room inside a castle, with four ornate stone pedestals in a row, each holding a glowing relic on a velvet cushion: 1) an ancient open grimoire glowing pale blue, 2) a silver shield with a small pulsing rune gauge, 3) a leather satchel with glowing tagged vials, 4) an enchanted magnifying lens over a gear-shaped talisman.

Style: classic Castlevania pixel art, chunky readable pixels, gothic stonework, dithered shading, engraved stone arches behind each pedestal.

Lighting: warm flickering torchlight and candle glow on each relic, deep purple shadows, cobwebs in the corners, faint dust motes in torch beams.

Composition: wide banner, four pedestals evenly spaced, symmetrical, centered, cathedral-like stone room framing.

Constraints: no readable paragraph text, no logos, no watermark, no brand marks.

KEY MOVE

Numbering the relics **1) 2) 3) 4)** inside one sentence is what stops the model from blending them into a single glowing pile.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

Four pedestals, four distinct relics — each one a metaphor for a beginner pillar, **enumerated** so they stay separate.

04 LIGHTING

Torchlight plus dust motes gives every relic its own glow without writing a lighting line per object.

02 SETTING

A candle-lit shrine: a small, contained room that reads as **knowledge and ritual**, not combat.

05 COMPOSITION

"Evenly spaced, symmetrical" is the whole trick — it forces a clean 1x4 grid instead of clutter.

03 STYLE

Style block copied from step 01 verbatim; only **"engraved stone arches"** is added as repeatable per-pedestal framing.

06 CONSTRAINTS

Identical no-text rule across all eight prompts. Consistency of constraints = consistency of pack.

RESULT

1x4 GRID

CANDLELIGHT

SYMMETRY

NO TEXT

GPT-IMAGE · 1536x1024

STAT ALTAR CORE LIMITS

////

Abstract settings turned into three physical gauges you can actually see.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of classic Castlevania games. A gothic stone altar room with three enchanted stained-glass windows set into the wall, each glowing with a different magical gauge: the left window shows a rising liquid blood-red meter (a scroll-length measure), the center window shows a glowing hourglass with sand mid-fall, the right window shows three stacked crystal orbs of increasing size (small, medium, large) each faintly lit.

Style: classic Castlevania pixel art, chunky readable pixels, ornate gothic stone carvings framing each window, dithered shading.

Lighting: cold moonlight through the glass mixing with warm candle sconces below each window, deep purple-black shadows, subtle magical particle glow.

Composition: wide banner, three windows evenly spaced, symmetrical, centered, cathedral wall framing.

Constraints: no readable paragraph text, no logos, no watermark, no brand marks.

KEY MOVE

Every setting becomes a **physical object**: liquid meter, falling hourglass, stacked orbs. Models render objects, not abstractions.

RESULT

STAINED GLASS

3 GAUGES

MOON + CANDLE

NO TEXT

GPT-IMAGE · 1536×1024

WHY IT WORKS — LINE BY LINE

01 SUBJECT

Three gauges, three literal mappings: **liquid** = length, **hourglass** = duration, **stacked orbs** = quality tiers.

04 LIGHTING

The cold-moon / warm-candle pair returns from step 01 — a recurring motif is what makes a pack feel authored.

02 SETTING

An altar room implies these are **fixed laws**, not preferences. The room does the arguing.

05 COMPOSITION

Same symmetry trick as step 02, different count. **Three, evenly spaced, centered.**

03 STYLE

Same locked style block; "ornate stone carvings" ties this frame to the shrine of step 02.

06 CONSTRAINTS

No numbers, no labels: the gauges have to communicate the concept purely by shape and fill level.

EQUIP ALTAR

PROMPT ANATOMY

////

Five prompt parts drawn as five orbiting relics — metaphor and lesson in one object.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of classic Castlevania games. A vampire hunter stands on a stone ritual circle in a candle-lit armory, arms slightly raised, surrounded by five glowing floating relics orbiting him at chest height: a carved wooden mask (identity), a gauntlet wrapped in chain (action), a brass spyglass (camera/viewpoint), a stained-glass shard glowing with shifting color (style), and a small lantern casting colored light (light & color).

Style: classic Castlevania pixel art, chunky readable pixels, gothic armory stonework, dithered shading, engraved ritual circle on the floor.

Lighting: candle glow mixed with each relic's own colored magic light, deep purple shadows, faint incense smoke curling upward.

Composition: wide banner, hunter centered, five relics evenly arranged in an arc around him.

Constraints: no readable paragraph text, no logos, no watermark, no brand marks.

KEY MOVE

Inline parentheses — **mask (identity)**, **gauntlet (action)**, **spyglass (camera)** — lock a 1:1 mapping the model cannot shuffle.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

The hero from step 01 returns, now centered. Five relics, each **tagged inline** with the prompt part it represents.

04 LIGHTING

The only slide where light **differentiates objects** rather than setting mood — one colour per relic.

02 SETTING

Armory plus ritual circle: "equipping" is exactly what assembling a prompt out of parts feels like.

05 COMPOSITION

Radial symmetry instead of the rows used in steps 02-03: variety without breaking the series language.

03 STYLE

One new detail (engraved ritual circle), same base style rule. **Add detail, never rewrite the block.**

06 CONSTRAINTS

Unchanged. Eight prompts, one constraint line — that repetition is the cheapest consistency you can buy.

RESULT

RITUAL CIRCLE

RADIAL ARC

COLOUR-CODED

NO TEXT

GPT-IMAGE · 1536×1024

CORRIDOR FORK

DO'S & DON'TS

PROMPT

One frame that argues with itself — safe path left, cursed path right, zero text.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of classic Castlevania games, split composition inside a castle corridor fork. Left half: a sturdy stone-tiled corridor lit by warm steady torches, intact banners on the wall, a confident vampire hunter silhouette walking forward. Right half: a crumbling corridor with cracked broken tiles, a chasm gap, swinging spiked pendulum traps, and sickly green-red witch-light glow.

Style: classic Castlevania pixel art, chunky readable pixels, gothic stone architecture, dithered shading, cobwebs on the cursed side.

Lighting: warm amber torchlight on the left, sickly toxic-green and blood-red glow on the right, both set against shared deep purple-black stone.

Composition: wide banner, clear left/right split down the center, symmetrical framing, single stone archway dividing the two paths.

Constraints: no readable paragraph text, no logos, no watermark, no brand marks.

KEY MOVE

Declaring “**split composition**” in the first sentence makes the model render two mini-scenes instead of one blurred average.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

One scene, two outcomes. The split is announced **before** any detail, so the halves stay independent.

04 LIGHTING

Colour does the signalling: amber = safe, toxic green and red = danger. No icons, no captions, no legend.

02 SETTING

The same corridor in two states — intact vs crumbling — reads as cause and effect, not two random places.

05 COMPOSITION

One stone archway gives the model a clean anchor for the split — otherwise you get a messy diagonal smear.

03 STYLE

“**Cobwebs on the cursed side**” shows how to scope a style note to half a frame without a second prompt.

06 CONSTRAINTS

No text means the contrast must survive on colour and decay alone. It does.

RESULT

SPLIT FRAME

AMBER VS TOXIC

ONE ARCHWAY

NO TEXT

GPT-IMAGE · 1536×1024

CASTLE MAP THE WORKFLOW

////

A map screen doing double duty as a four-stage process diagram.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG scene in the style of a classic Castlevania castle map / overworld screen. Four gothic chambers connected by a winding stone stairway path rising left to right across a cross-section of a haunted castle: 1) a small candle-lit study with a sketch on a lectern (draft), 2) a mid tower room with a spinning hourglass and looping chain motif (iterate), 3) a workshop chamber with an anvil and glowing tools (refine), 4) the highest throne chamber with a lit brazier and banner (finalize). **Style:** classic Castlevania pixel-art map screen, chunky readable pixels, cross-section castle silhouette, dithered shading, gothic stonework. **Lighting:** warm golden torchlight tracing the stairway path between chambers, deep indigo night sky with bats and a crescent moon behind the towers. **Composition:** wide banner, ascending left-to-right path, four chambers evenly spaced along the castle's height. **Constraints:** no readable paragraph text, no logos, no watermark, no brand marks.

KEY MOVE

"Ascending left-to-right" converts a floor plan into a timeline: the eye walks the workflow in the right order.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

The scene type changes — **map screen, not room** — while the universe stays identical. Genre shift, same world.

04 LIGHTING

The torch-lit path is wayfinding disguised as atmosphere — light tells the eye where to travel next.

02 SETTING

Each chamber carries its stage in parentheses (draft / iterate / refine / finalize): the step-04 trick, reused.

05 COMPOSITION

Left-to-right ascent turns a spatial map into a sequence. The geography is the process.

03 STYLE

"Cross-section castle silhouette" is the single term that buys the Metroidvania look.

06 CONSTRAINTS

No labels: lectern, hourglass, anvil and brazier have to carry four abstract stages on their own.

RESULT

CROSS-SECTION

4 CHAMBERS

TORCH-LIT PATH

NO TEXT

GPT-IMAGE · 1536×1024

BOSS FIGHT TROUBLESHOOTING

////

The error state as a character, with the corruption scoped to one body.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG boss-battle scene in the style of classic Castlevania games. A vampire hunter braces with his whip in a grand castle hall, facing a large stone gargoyle boss with glowing molten-orange cracks running across its stone body, its eyes glowing an unstable flickering red.

Style: classic Castlevania pixel art, chunky readable pixels, gothic hall architecture, dithered shading. The gargoyle's cracked-stone texture and molten fissures are the only "corrupted" element — clean pixel art everywhere else, no static, no scanlines, no color noise, no scattered particle grain anywhere in the image, wings and background stay crisp and fully rendered.

Lighting: warning-style flickering red and amber glow radiating from the gargoyle's cracks, deep indigo hall shadows, hunter rim-lit by torchlight.

Composition: wide banner, hunter on the left, corrupted gargoyle boss on the right, dynamic confrontation pose, tension in the stance.

Constraints: no readable paragraph text, no logos, no watermark, no brand marks, no glitch/static/noise overlay, no scattered colored pixel grain.

KEY MOVE

Scoping the damage — **"molten fissures are the only corrupted element"** — keeps the hero and the hall clean pixel art.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

Damage drawn as **molten cracks in stone** — a material, not a filter, so it stays crisp pixel art.

02 SETTING

The grandest hall in the series — the room scales with the stakes of a render you have to fix.

03 STYLE

The word **"only"** is doing all the work: it fences the corruption to one body.

04 LIGHTING

"Warning-style flickering red" borrows UI alert language, so the danger reads in under a second.

05 COMPOSITION

Classic left-vs-right boss framing: hero and threat get equal weight, tension without motion blur.

06 CONSTRAINTS

Even an error-state concept stays purely visual — no **"ERROR"** text anywhere in the frame.

RESULT

DAMAGE SCOPED

WARNING RED

LEFT VS RIGHT

NO TEXT

GPT-IMAGE · 1536×1024

THRONE ROOM VICTORY LAP

////

Same hunter, same light as step 01 — plus an empty plaque that blocks fake text.

PROMPT — COPY-PASTE READY

A wide 16-bit pixel-art RPG victory scene in the style of classic Castlevania games. A vampire hunter stands triumphant on the steps of a grand throne room, holding a glowing ornate relic/artifact high above his head, coiled whip at his belt, one boot resting on a fallen bat-winged gargoyle statue fragment. Tall stained-glass windows behind him flood the hall with moonlight; a soft shower of pixel dust and golden light motes drifts down from above.

Style: classic Castlevania pixel art, chunky readable pixels, gothic throne room architecture, dithered shading, dramatic hero silhouette pose.

Lighting: warm golden light rays bursting from the raised relic, cool blue moonlight through stained glass, deep purple-black shadows in the corners.

Composition: wide banner, hunter centered on a raised stone dais, an ornate empty stone banner/plaque shape low in frame (no text inside it).

Constraints: no readable paragraph text anywhere, no logos, no watermark, no brand marks.

KEY MOVE

Asking for an **empty plaque** “(no text inside it)” pre-empts the model’s favourite failure: inventing letters.

WHY IT WORKS — LINE BY LINE

01 SUBJECT

Same coat, same whip — and the **fallen gargoyle fragment** under his boot closes the loop with step 07.

04 LIGHTING

Golden relic light plus cool moonlight repeats step 01’s pairing and bookends the whole series.

02 SETTING

The throne room is the top chamber of step 06’s map. The location itself says “you finished”.

05 COMPOSITION

An **explicitly empty** plaque: name the shape, then forbid its contents in the same breath.

03 STYLE

One new instruction — “**dramatic hero silhouette pose**” — pushes this toward a poster, not a mid-action still.

06 CONSTRAINTS

The ban is restated with emphasis here, because a blank plaque is the highest-risk spot on the page.

RESULT

HERO POSE

GOLDEN RAYS

EMPTY PLAQUE

NO TEXT

GPT-IMAGE · 1536×1024
